Introduction to Debriefing Skills for Simulation Teaching.

One day Program – 8.30am to 3.00pm

Illawarra Shoalhaven Health Education Centre 42 Loftus Street Wollongong.

“Debriefing following a simulation event is a conversational period for reflection and feedback aimed at sustaining or improving future performance. It is considered by many simulation educators to be a critical activity for learning in simulation-based education. Deep learning can be achieved during debriefing and often depends on the facilitation skills of the debriefer as well as the learner's perceptions of a safe and supportive learning environment as created by the debriefer.”

Structured Debriefing in Simulation-Based Education. [Palaganas JC](#)¹, [Fey M](#), [Simon R](#).

This one day course will introduce educators or those involved in teaching, to debriefing skills. It will ensure understanding and provide practice in developing debriefing skills in different simulation based scenarios.

This course is aimed at clinical staff who are using simulation or who have not previously had any formal instruction in debriefing skills and would like to introduce this component into their teaching program.

To ensure ample practice during this session, places are limited and pre-reading will be provided.

The course is free, just bring your lunch.

To enrol or if you need further information, please contact: ISHEC on 4254 3666; email: ISLHD-HECBookings@health.nsw.gov.au.
